Muhammet Harun Şehitler

Software Developer — games, web and AI

İzmir, Türkiye · open to relocation +90 530 206 73 95 mharunshtlr01@icloud.com harunsehitler.github.io

Profile

Software developer who takes an idea all the way to a working product. Uses Lua, Python and MySQL on the server and React with TypeScript on the interface. Launched a multiplayer platform with a team of 10–15. Picks up new fields such as Rust, C#, statistical modelling and 3D quickly and turns them into working products. Works with coding agents (Claude Code, Antigravity) under quality rules he wrote himself.

Experience

Founder and Team Lead

2024 - July 2026

Multiplayer online platform (FiveM / GTA V) — independent project

- Led a team of 10–15 developers, designers and testers; ran task assignment, release planning and code review.
- Designed the server architecture from scratch in Lua and MySQL: player data, session management and economy systems.
- Built the admin panel and player-facing interfaces in React and TypeScript.
- Launched in February 2026; over six active months it served 200–250 regular players and a community of 450 members.

Projects

lum-phone — in-game smartphone

Interface that follows iOS behaviour, plus a developer API for third-party apps. Targets 0.00 ms CPU cost while closed. In development.

React, TypeScript, Vite, Tailwind, Lua

Luminer Studios — script store

Brand, bilingual site and promotional visuals. A pipeline that renders the real interface in a browser and turns it into product images.

TypeScript, Vite, GSAP, Playwright

Tolmac — game localization tool

Decoded WWE 2K26's encoded string format. Translated ~1.2 million words with a local language model and automatic quality checks in ~15 hours.

C#, .NET, SQLite, Ollama

LUXERA — voice AI assistant

A router that sends each task to the right model, speech recognition and speaker verification. 0.4–0.6 s to the first word.

Python, FastAPI, WebSocket, faster-whisper

Game Boy emulator

Written from scratch in Rust. Passes all Blargg CPU and timing test ROMs; 0 pixel difference on the dmg-acid2 graphics test.

Rust

ProScore — football prediction system

Data collector, statistical model and dashboard. Developed against a 2,063-match backtest; retrains itself every day.

Python, MySQL, React, three.js

Education

Computer Programming — Associate Degree

June 2026

Çukurova University, Ceyhan Vocational School — Adana, Türkiye

Skills

Languages	TypeScript, JavaScript, Lua, Python, C#, Rust, SQL, HTML, CSS
Interface	React, Vite, Tailwind, GSAP, three.js, interface and visual design
Server and data	MySQL, SQLite, FastAPI, WebSocket
AI	LLM integration, local models (Ollama), speech recognition and synthesis, agent-based development
Tools	Git, Playwright, Blender
Spoken	English B2 (BTK Academy certificate) · Turkish native
